EGP 1,850,000

Information on fuel consumption, CO₂ emissions and energy consumption according to the German Ordinance on Energy Consumption Labelling for Passenger Cars

Brand: BMW	Fuel type: Octane 92 – octane 95
Model: X6 xDrive50i.	Other energy sources: -
Performance: 330 kW	Kerb weight: 2,170 kg

Fuel consumption	combined: 11.8-9.7 l / 100 km
-------------------------	--------------------------------------

CO₂ emissions	combined: 253 g / km
---------------------------------	-----------------------------

The stated values were determined according to the prescribed measurement process (Section 2, Nos. 5, 6, 6a of the German Ordinance on Energy Consumption Labelling for Passenger Cars in the current valid version). CO₂ emissions resulting from the production and provision of the fuel or other energy sources are not taken into account when determining the CO₂ emissions in accordance with the requirements of Directive 1999/94/EC. The information does not refer to an individual vehicle and is not part of the offer but rather is used solely for comparison purposes between different vehicle types. The fuel consumption and emission levels stated here refer to a vehicle from the current production run. Until your desired delivery date, changes may occur in the production run that may affect the weight, aerodynamics or tyre rolling resistance of the vehicle, possibly altering its fuel consumption and CO₂ emissions by an increase or decrease of up to 5g/km.

Information in accordance with directive 1999/94/EC

The fuel consumption and CO₂ emissions of a vehicle are not solely dependent on the vehicle's fuel efficiency, but are also influenced by driving style and other non-technical factors. CO₂ is the greenhouse gas primarily responsible for global warming. A guideline for the fuel consumption and CO₂ emissions of all passenger car models offered in Germany can be obtained free of charge, anywhere in Germany where new passenger car models are displayed and offered.
